

Monitor and verify scheduled tours with **Tour-Positive®**

Solutions for a Safer World™

The Tour-Positive® system does more than just log tour data; the data is streamed in real-time to a command center where live operators monitor tour progress and ensure rapid response to any tour deviation or incident.*

Andrews International (AI) developed **Tour-Positive®** to ensure compliance with security officer requirements on site and facilitate rapid response when needed. Officers use a hand-held, military-grade communication device to scan barcodes strategically placed at guard tour and patrol checkpoints. The tour data is transmitted to our central command center, where it is monitored 24/7. With real-time, live monitoring and response, the proper individuals are immediately notified of deviations or incidents, with deployment as necessary for situations that require immediate follow up. **Tour-Positive®** can also be customized to lead officers through a series of pre-programmed questions regarding site equipment to identify maintenance issues.

Benefits of Tour-Positive®

- Tour data is available in real time on the web.
- Scheduled tour activity is monitored, and exceptions trigger alerts.
- Equipment can be monitored, such as freezers and gauges, with real-time alerts when maintenance issues are detected.

Key Features of Tour-Positive®

- **Customized alert process** uses e-mail, voice, and SMS text.
- **GPS Tracking** (including Full Map Integration) confirms post coverage and officer location in real-time.
- **Speed monitoring** tracks the speed of patrol vehicles and ensures compliance with posted speed limits and property orders.
- **Heading feature** tracks the direction of officer tour patterns and locations toured.
- **Charging status** monitors when the device is in or out of the charger.
- **Image capture technology** allows officers to capture photos of incidents for communication, reporting, and documentation and allows supervisors to capture photos of inspection violations to enforce training efforts and back up disciplinary action.
- **Post orders documents** are accessible from the device, providing a ready reference for officers.
- **Clock-In/Clock-Out feature** tracks officer arrival and departure times.
- **Notification of inactivity** alerts supervisors to post coverage changes or absences, enabling rapid response to problems.

Officers use a shockproof, waterproof, Android-powered devices to scan UV resistant, highly durable, permanent polyester 2D barcodes.

Completed Tour : Round 1 (3rd Shift/1st Half)			
Scheduled Start	06/10/2012 22:01:00	Scheduled End	06/11/2012 02:00:00
